DETAILED ACTION

Drawings

The drawings are objected to because the labels to the drawings should be written in English. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

Claims 3, 19-21 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in alternative only. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

Art Unit: 2877

Claims 1-21 are objected to because it fails to conform to current U.S. practice. It appears to be a literal translation into English from a foreign document and is replete with idiomatic errors. In addition, in claim 17, the letters referring to the method steps should not be repeated.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 4, 8-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 4 recites the limitation "said device incorporates at least a modulator", it is not clear where the modulator is positioned in relation to the other element of the device.

Claim 8 recites the limitation "the modulators". There is insufficient antecedent basis for this limitation in the claim.

Claim 10 recites the limitation "said spectral resolution". There is insufficient antecedent basis for this limitation in the claim.

Claim 12 recites the limitation "said sensitivity". There is insufficient antecedent basis for this limitation in the claim.

Claim 10 recites the limitation "the dynamic range". There is insufficient antecedent basis for this limitation in the claim.

Claim 14 recites the limitation "the measurement or working wavelength range". It is unclear what is assumed under the measurement and what is exactly the working wavelength range, since the claim does not clearly set forth the metes and bounds of the patent protection desired.

Claim 15 recited the limitation "the functions of first modulator". There is insufficient antecedent basis for this limitation in the claim. The word "can" makes the limitation following it optional.

Allowable Subject Matter

Claims 1-3, 5-7, 16-21 would be allowable if rewritten or amended to overcome the objections set forth in this Office action.

Claims 4, 8-15 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter: The prior art of record taken alone or in combination, fails to disclose or render obvious introducing a test signal thorough the optical access positioned at the opposite site of the input of the probe signal, in combination with the rest of the limitations of claims 1 and 17.
